EDUCATION

California State University Long Beach

Bachelor of Science in Computer Science

Long Beach, CA

TECHNICAL EXPERIENCE

Zayed Software LLC - Software Engineer & Founder

LineReady | React, Supabase/PostgreSQL, Capacitor, PostHog | iOS App Store + Web

2026 - Present

- Built and launched a multi-tenant restaurant operations platform adopted by 29 of the roughly 40 team members at the Chick-fil-A store it was built for, with 86% active in the last 30 days, replacing paper checklists and group chats for scheduling, training, food-safety logs, and team messaging.
- Designed PostgreSQL row-level-security tenant isolation, a 5-tier role/permission system, and invite-code onboarding; shipped web and iOS clients from one React + Capacitor codebase.
- Localized 1,743 English/Spanish strings and added mandatory video training with watch tracking to support adoption across bilingual shifts.
- Closed a production data-exposure hole where invite tokens were readable by unauthenticated clients by locking the table behind row-level security and a scoped lookup RPC, verified end to end as an anonymous client.

LockedIn | React 19 + Vite, Flask, Supabase/PostgreSQL, Capacitor | Private beta (TestFlight)

2025 - Present

- Built a GLP-1 tracking application with dose logging, titration schedules, injection-site rotation, and dose-vs-weight analytics against a 321K-record public nutrition dataset, localized in English, Spanish, and Arabic.
- Implemented a subscription paywall and write-once creator-code attribution with server-side validation and PostHog funnel instrumentation.
- Cut worst-case food-search latency 25x (5,607ms to 223ms) by replacing a non-index-servable strpos() filter with indexed ILIKE, and rebuilt search ranking so generic staples outrank branded products, moving the top "chicken breast" result from #1296 to #1.

Chick-fil-A Foothill Website | HTML/CSS/JavaScript, Netlify | Web

2026 - Present

- Built a restaurant's public site and gated internal team portal in one deploy: guest-facing careers, catering, and community pages alongside role-based team-member and leadership views with request flows for time-punch adjustments, sick pay, and leadership applications.
- Localized the portal in English and Spanish with a custom translation layer, and configured Netlify security headers (HSTS, X-Frame-Options, nosniff), per-asset-type cache policies, and 301 redirects that retired the v1 portal without breaking saved links.

Mini Golf Score Tracker | Flask, JWT, Turso/SQLite, React, Capacitor | iOS + Web

2025 - Present

- Launched a multiplayer scorekeeping app to the iOS App Store and web, backed by a 19-endpoint Flask REST API with JWT authentication, PBKDF2-HMAC password hashing, and per-user authorization scoping.

WORK EXPERIENCE

Chick-fil-A - Director

Mar. 2022 - Present

Promoted from Team Member to Shift Lead to Director (Jun. 2024).

- Improved corporate CEM customer-satisfaction scores from 59% to 74% over two years by launching targeted service initiatives and coaching leaders weekly.
- Ran daily operations on software I built myself, LineReady and the store website, replacing paper checklists, group chats, and manual request forms.
- Held labor cost within corporate target during peak rushes by building demand-forecasted schedules for 40+ employees around hourly customer forecasts.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, C, SQL

Frontend & Mobile: React, Capacitor (iOS), HTML/CSS, Vite

Backend & Data: Flask, PostgreSQL, Supabase (row-level security), SQLite, Turso (libSQL), REST APIs, JWT authentication

Tools: Git, Xcode, App Store Connect, PostHog, Netlify, Render
